

FIRE TRAINING — ACADEMY —

Fire Warden Training

What would happen if your company had a major fire?

Do you have sufficient procedures in place to ensure that all personnel are safe, your business premises are protected and to ensure that if you do have a fire that the insurance company will pay out?

Do you have trained Fire Wardens in place?

Do you have sufficient people trained to cover leave and holidays?

Do your staff know what to do in the event of a fire?

Do you have correct test and recording procedures in place?

Do your staff know what extinguisher to use on which type of fire?

How many of your staff have actually operated a fire extinguisher in a real fire scenario?

Why should you train your employees? Apart from it is a legal requirement under the new Regulatory Reform (Fire Safety) Order that came into force on the 1st October 2006 it has also been proven time and again that a well trained workforce not only reduces the risk of fire, but in the event of one, employees will respond quickly and effectively to minimise the damage.

70% of companies that have a major fire never trade again! (Arson Prevention Bureau)

How people learn: Our trainers understand that people learn through their five senses sight, sound, touch, smell and taste. Generally people have a preferred learning style i.e. visual (reading), auditory (listening to tapes) and kinaesthetic (hands on).

Traditional classroom learning styles previously taught, may only have covered the visual and auditory learning styles. However, we have designed our courses to maximise the learning for all students that attend.

Our practical fire extinguisher element of the course is specifically designed to give your personnel the opportunity to operate fire extinguishers in a real fire scenario. Equipment Used: We've invested in some of the best fire safety training technology that money can buy. We use state of the art, all weather, gas-powered, environmentally friendly fire safety training simulators. This replaces the outdated approach of setting fire to a tray of petrol in your car park. The fire training simulator produces plenty of flames, heat and drama but has none of the drawbacks of previous methods used.

This course will encourage personnel to take an active role in the protection of their livelihoods and your business.

Course Structure: Presentation

- Intro to fire safety
- Fire precautions/health & safety legislation
- General fire prevention measures
- Actions to be taken in the event of a fire

- Evacuation procedures
- Means of escape
- Types of alarms and fire detectors
- Fire wardens responsibilities
- Calling the fire brigade
- Information required when the fire service arrives
- Triangle of combustion
- Classes of fire and methods of extinction
- Operation of fire extinguishers
- Basic fire precautions
- Fire register and accountability procedures

Questionnaires and Videos: The training is supported by a series of questionnaires and videos. Each delegate will receive a certificate confirming the completion of training.

Live Fire Training: The presentation is followed by a comprehensive practical fire extinguisher handling program terminating with a real fire training exercise on a portable, environmentally friendly, propane fuelled fire trainer - each delegate will have the opportunity to extinguish different types and classes of fires.

All of our instructors have at least 10 years operational experience in one of the fire services
